

BotBuzz

The Decentralized Onchain News & Social Tipping Protocol on the BOT Network

● LIVE ON BOT TESTNET (CHAIN ID 968)

PURE SOLIDITY ^0.8.24 + OPENZEPPELIN 5.X

VITE + REACT + TYPESCRIPT + VIEM

The Digital News Distribution Crisis

Modern journalism and social commentary suffer from deep centralization bottlenecks.

🚫

Censorship & Manipulation

Centralized feeds deplatform independent writers and silently alter discovery algorithms to serve corporate revenue objectives.

⚡

Fragile "Web3" Storage

Many DApps rely on off-chain IPFS gateways or cloud pinning that break, experience gateway timeout, or disappear permanently.

💸

Exploitative Monetization

Ad networks extract 30–50% cuts. Authors receive fractions of a penny while readers lack a frictionless, direct micropayment layer.

🤖

Sybil & Clickbait Farms

Without cryptographic provenance or onchain skin-in-the-game, feeds are overwhelmed by synthetic bot farms and low-signal noise.

The BotBuzz Solution

An unstoppable onchain news board with peer-to-peer economic incentives.

100% Onchain Storage

Headlines (1-100 bytes) and descriptions (1-500 bytes) stored directly in smart contract state. No IPFS, no backend servers, zero single points of failure.

Direct BOT Tipping

Readers tip authors directly in native BOT. The contract takes 0% commission and holds 0 BOT balance. NonReentrant push payments protected by OpenZeppelin.

Transparent Curation

1 vote per wallet per post (Like: +1, Dislike: -1). Transparent score calculation, dynamic vote switching, and reversible voting with full invariant safety.

Smart Contract Engineering

Built with OpenZeppelin 5.x ReentrancyGuard and Checks-Effects-Interactions pattern.

```
// SPDX-License-Identifier: MIT
pragma solidity ^0.8.24;

contract BotBuzz is ReentrancyGuard {
    struct Post {
        uint256 id;
        address author;
        string title;       // 1 - 100 bytes
        string description; // 1 - 500 bytes
        uint64 createdAt;
        uint256 likes;
        uint256 dislikes;
        uint256 totalTips;
    }

    // Direct tip transfer with Reentrancy protection
    function tip(uint256 postId) external payable nonReentrant {
        if (msg.value == 0) revert ZeroTipValue();
        Post storage post = _posts[postId];
        if (msg.sender == post.author) revert CannotTipOwnPost();

        post.totalTips += msg.value;
        emit Tipped(postId, msg.sender, post.author, msg.value);

        (bool success, ) = post.author.call{value: msg.value}("");
        if (!success) revert TipTransferFailed();
    }
}
```

🛡️ Multi-Level Reentrancy Defense

All state mutations (tipping, voting, vote removal) are shielded with OpenZeppelin's ReentrancyGuard, thwarting reentrancy attempts from malicious contracts.

⚡ Paginated Newest-First Queries

`getPosts(offset, limit)` returns newest posts first with full boundary clamp safety, handling zero total, offset out-of-bounds, and zero limit gracefully.

🧪 Invariant Fuzz Testing (256 Runs)

Fuzz testing simulates random sequences of 15 actions across 4 distinct voters to mathematically prove likes/dislikes never underflow or desync.

Live on BOT Testnet (Chain ID 968)

Fully verified smart contract with live onchain activity and transactions.

5

ONCHAIN POSTS

Permanent stories stored in contract state.

24+

LIVE TRANSACTIONS

Confirmed posts, votes, switches & tips.

100%

TEST SUITE PASS

23 unit, fuzz, and edge-case tests passed.

0%

PROTOCOL FEE

100% of tips go directly to post authors.

On-Chain Directory & Verification

Contract Address: `0x8939Fd5d0c4E6aB2A1B26222BECF809e30B19ae7` VERIFIED

Deployment Tx: `0x043e2c53e52d1595039e9238d149c1ac574915e17270445ebb3039903f6f3ece`

BohrScan Explorer: `https://scan.bohr.life/address/0x8939fd5d0c4e6ab2a1b26222becf809e30b19ae7`

Modern, Blazing-Fast Frontend

Built with Vite + React 18 + TypeScript + viem. Zero bloated component libraries.

🗂️

Intuitive Tabbed UX

Instant navigation between **All News** feed and **Post News** publishing interface with live post counter badge.

✍️

Live Character Counters

Real-time indicators for Title (0/100) and Description (0/500) preventing invalid gas spends before broadcast.

🔒

Authorization Guard

Robust account synchronizer prevents RPC 4100 errors, prompting account authorization and switching to BOT Testnet seamlessly.

🔥

Multi-Mode Feed Sorting

Switch seamlessly between **Newest**, **Top** (highest net score), and **Most Tipped** stories.

💎

1-Click Micro-Tipping

Integrated tip popout with quick presets (0.05, 0.1, 0.5, 1 BOT) and author self-tip prevention.

🛡️

Plain Text Security

All user-generated text is rendered as plain escaped text, eliminating XSS and markdown injection attack vectors.

Why BotBuzz Matters for BOT Ecosystem

A foundational public utility driving organic token velocity and AI news aggregation.

🔥 Native BOT Gas & Velocity Driver

Every news creation, upvote, downvote, vote-switch, and tip is an onchain transaction. BotBuzz creates high-frequency micro-utility for the native BOT currency, driving sustainable network fees.

🤖 Gateway for Autonomous AI Journalism

AI agents, automated oracles, and intelligence bots can broadcast breaking real-time sports, financial, and governance updates to BotBuzz via programmatic RPC calls, earning autonomous tipping revenue.

📢 Protocol Announcement Bulletin

Provides Bohr ecosystem projects an immutable, verifiable, and tamper-proof bulletin board for critical smart contract upgrades, audit releases, and governance decisions.

🌍 Censorship-Free Citizen Media

Empowers whistleblowers, independent reporters, and grassroots analysts globally to publish verifiable news that cannot be deleted or silenced by external entities.

Product Roadmap

Clear progression from testnet deployment to multi-channel syndication.

Phase 1: Delivered

COMPLETE

- ✓ Solidity ^0.8.24 core contract
- ✓ 23 Foundry unit & fuzz tests
- ✓ Deployed to BOT Testnet (968)
- ✓ Verified on BohrScan explorer
- ✓ Single-page dark theme DApp
- ✓ Multi-wallet 24-tx stress test

Phase 2: Mainnet Expansion

Q1 2027

- ○ BOT Mainnet deployment (Chain 677)
- ○ ENS / .bot author profile resolution
- ○ RSS/Atom automated publisher node
- ○ Subgraph indexer for trending metrics
- ○ Push notification subscriptions

Phase 3: Protocol Scaling

Q2 2027

- ○ Embeddable BotBuzz Widget SDK
- ○ Decentralized tip splitting for teams
- ○ Topic tag registry & search index
- ○ Cross-chain news syndication layer
- ○ Mobile progressive web app (PWA)

The Front Page of the BOT Chain

Empowering global, decentralized, and censorship-resistant news with direct author rewards.
